# How to build with fischertechnik

Our modular fischertechnik system comes with a variety of building blocks, connectors, gears, wheels, and other components. These building blocks are designed to fit together using a unique interlocking system, allowing you to build sturdy and complex structures. Let's get started! Simply slide the blocks into each other, and you can build your first basic models.

## Meet our hero

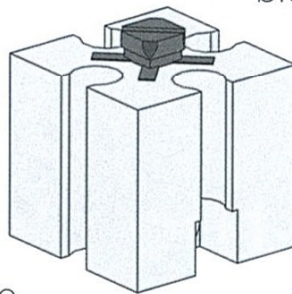

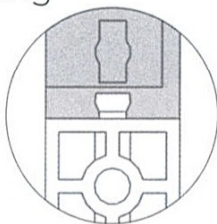

Our basic building block

Versatility

Allows the construction of additional building blocks on all six sides.

Stability

The pin and groove joint creates a strong connection between the building blocks.

Creativity

There are endless creative opportunities for your creations.

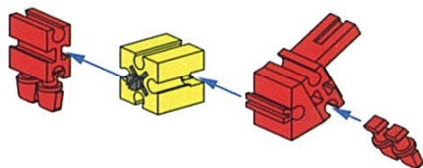

...slide and play!
